This email is a continuation of bi-weekly updates going forward that will provide important project-related information as well as an overview of activities that are expected during the upcoming two-week period.

**Upcoming construction activities scheduled for the period of May 3 through May 17.**

- Structural connections to the existing building in the area of the core addition are under way and ongoing. Concrete demolition and drilling will be required at each floor level. Minor demolition work and preparation / installation of the core addition foundations are now underway.
- On the Ground Floor west wing, a temporary partition was installed to create a safe work zone enabling the demolition and reconstruction of a corridor wall. Work will continue for several more weeks. Signage and barriers safely route pedestrians around the work. The corridor will remain open for use throughout the work.
- New electrical duct bank in the west parking area in the rear of the building is complete. Temporary asphalt patching is under way. A logistics plan illustrating this phase and dates is available on the project website.
- Interior piping work will occur in the ground floor corridor ceiling. Barriers and signage are installed to identify the work areas and guide building occupants safely around the work.
- Dormer work to allow for new ductwork continues on the building exterior, north and south, Seventh Floor.
- Window replacement on the Third floor started today and will continue through June.
- Fire alarm system rough-in on the Ground Floor is scheduled to begin May 9 and continue through May.
- Sprinkler pipe rough-in on the Ground Floor is scheduled to begin May 9 and continue through June.

**Bathroom facilities changes:**

On January 24th, 2022 a series of building bathroom facilities changes occurred. Single occupant bathrooms located in the existing elevator lobby locations on floors 1-7 are now out of service due to construction related activities in these areas. A new temporary bathroom facility has opened on the second floor of the building adjacent to the elevator lobby to replace the facilities taken off line due to the project. The temporary facility, along with other existing bathrooms are available until the new permanent lobby core restrooms on each floor come on line in the fall of 2023. Other existing bathrooms outside of the lobby locations referenced will remain in service throughout the project. The plan of the outages and location of the temporary facilities are described and illustrated in the *Bathroom outages and temporary facilities diagrams and schedules & Key dates* exhibits available on the project website.

**Johns Hopkins Federal Credit Union ATM location change:**

The JHFCU ATM has been moved from the ground floor elevator lobby to facilitate a key phase of the construction. The ATM's new location is the ground floor breakroom in the south wing, room G42C:
Please note that as some of the above activities are outdoors, weather can affect actual performance.

“Town hall” type meetings will be offered by JHFRE and the construction manager to those who would benefit from additional specific information about the work and its potential impact on the campus. These meetings will provide the opportunity for project stakeholders to ask questions of the project and construction management team. Please contact me directly if you have interest in attending a meeting.

For additional information, you are encouraged to visit the JHFRE Wyman Infrastructure website at: https://www.jhfre.jhu.edu/projects/wyman/index.html
